

DAVID GEE, SHERIFF
Hillsborough County
Tampa, Florida

INTER-OFFICE MEMORANDUM

DATE: October 27, 2015

TO: Chief Deputy Jose M. Docobo

FROM: Janice K. Wilder *gwl*
Senior Procurement Analyst

RE: Waiver of Competitive Procurement Process based on Sole Source

MESSAGE:

Please consider approval of this request to waive the competitive procurement process for the purchase of the "ShotSpotter Flex Gunfire Location, Alert and Analysis" system. The request is based on the attached documentation that ShotSpotter is the sole source of such technology as geared to law enforcement and as approved by the BOCC for purchase with the Crime Prevention and Safe Neighborhoods Trust Fund.

The waiver applies to the initial purchase cost of \$800,000 which includes a three year subscription to service (approved proposal attached) and for all future costs associated with operating, maintaining and expanding the ShotSpotter system.

JKW

APPROVED	DISAPPROVED	ACK	DATE	NAME	ABN	TITLE
☒	☐	☐	10-29-15	<i>Christina R. Porter</i> Christina R. Porter	244886	Comptroller
☒	☐	☐	10/30/15	<i>Jose M. Docobo</i> Jose M. Docobo	792	Chief Deputy

To whom it may concern:

Please accept this letter as information that ShotSpotter, Inc. (d/b/a SST, Inc.) is the sole source vendor of the wide-area "Gunshot Detection, Location, Alert and Analysis Solution" worldwide. This wide-area system uses acoustic sensing technology protected by 32 unique and current patents to identify, discriminate, record and locate gunshots and other explosive events to law enforcement and police departments within seconds of the shots being fired. The sensing is accomplished via multiple networked acoustic sensors deployed over a wide area that communicate registered gunshot and explosion activity back to a central server.

There is currently only one wide area gunshot detection and location system available commercially for law enforcement and it is exclusively offered by SST, Inc. SST, Inc. is also the exclusive provider of ShotSpotter FlexSM, the cloud-based, subscription managed service offering which includes warranty, repair, maintenance and support services on all of its systems.

We have been informed that your agency has determined that for such a solution to be beneficial it must have the capabilities listed in this document. SST, Inc. is the only vendor in the world able to deliver these capabilities. Many of these capabilities and techniques are the exclusive intellectual property of SST, Inc.; are patented; and, can only be provided by SST, Inc. and licensed to end users.

- Detect a gunshot in a public place and provide the location of the event (address) and geographical coordinates of the event back to your agency through a qualified reviewed alert and plot the event on a map.
- Provide a short recording of the event for immediate playback.
- Provide the ability to record the event and save all corresponding information in a hosted Microsoft SQL database so it can be forensically examined at a later date with online data retention of 2 years and offline retention of the data for another 5 years.
- The system and the associated 24x7x365 incident review service must be able to distinguish between a gunshot and other similar sounds (fireworks, car backfiring, etc.) and classify these events for a web-based display
- Acoustic sensors must be certified to withstand harsh wind and other demanding climate conditions thus reducing need for constant maintenance.
- The system must have a proven track record of performance in a deployment area of equal to or greater than 3 square miles.
- System must be able to timestamp individual gunshots to 100th of a second utilizing a GPS clock.
- System must have the ability to recreate crime scene (provide location(s) of where individual shots occurred, the time stamping of when each individual shot was fired within 100th of a second, and the audio recording and acoustic waveform signature of the shot(s)).
- The systems data output, including detailed forensic reports, must be court certifiable with current case law supporting its use as forensic evidence.
- Ability to network acoustic sensors together in a Wide Area Network utilizing any/all of the following communication methods (Wireless 900 MHz, Telephone lines, Existing WAN access point, public wireless/cellular carriers).
- The system must have a documented proven track record of helping to reduce gun-related crimes, assisting in arrests, assisting in the confiscation of weapons, used as evidence in court and assisting in the prosecution and conviction of criminals, in the areas where the system is deployed.
- Interface with networked video surveillance cameras for automated control when an event is detected.
- The system must be US Department of Homeland Security (DHS) Safety Act certified and be listed on the DHS Responded Knowledgebase as allowable use for DHS funds.

Wide-Area Acoustic Surveillance

ShotSpotter FlexSM uses nondescript acoustic sensors deployed over wide areas (e.g., from one to many square miles). Acoustic analytics classify incoming potential incidents as gunfire, explosions, or other loud sounds. The end result is gunfire alerts that include a pinpoint location that reveal incident severity and situational intelligence. Through its patented technology¹ and methods only SST, Inc. can deploy systems requiring a relatively small number of acoustic sensors to achieve a blanket of coverage over wide areas; fewer sensors results in lower procurement and operating costs.

Situational Intelligence and Forensic Data

ShotSpotter FlexSM includes a web-based Incident Alert Console that runs on any standard browser based platform, available in both a desktop and mobile operating modes. Incidents are shown as dots on an aerial map image along with the corresponding street address. Maps can also be viewed in street and oblique aerial views. Audio clips are available to field-based commanders as well as responders. The audio provides invaluable situational intelligence while en route to a scene, stationary in a command van, moving in patrol vehicles, or airborne in helicopters.

The ShotSpotter solution captures and stores a precise timestamp plus GPS coordinate for each detected incident and each round of a multi-round gunfire incident. This level of detail has successfully been used in investigations and courtrooms to exonerate contentious officer-involved shootings, corroborate testimony, refute false testimony, and prove the presence of multiple shooters in the absence of physical evidence and/or eyewitnesses.

The ShotSpotter solutions offers the following unique forensic and intelligence data that enhance situational awareness, investigations, and prosecutions:

- Audio clips of each incident from multiple sources that can be exported as standard MP3 files from each participating sensor for sharing with agents, prosecutors, and presentation in court
- Ability to know if the incident involved a single round or multiple rounds of gunfire
- Ability to determine if the incident involved one or multiple shooters
- Ability to infer type(s) of firearm(s) involved in gunfire incidents
- Details of a shooter's path and rate of movement if multiple rounds are fired on-the-move (e.g., drive-by shooting)

Data for Investigative Follow-up, Crime Analysis, CompStat

Only SST, Inc. offers persistent storage of detailed incident information plus reports and analytics to support CompStat and violence suppression operations. SST, Inc. logs every detected incident and associated data in a database for secure and persistent storage. This data can be mined and analyzed to reveal patterns and trends to successfully drive intelligence-based tactical and strategic operations. Standard reports and an industry standard Structured Query Language (SQL) database feed ongoing intelligence with a comprehensive awareness of what is transpiring within specific areas. This data allows agencies to proactively and effectively apply resources when and where they're most needed; justify specific increases in assets and resources; and save costs. Securely stored incident data is invaluable for forensic purposes to support investigative efforts and fortify prosecution cases, especially when complemented with SST, Inc. acoustic and gunfire specialists providing expert testimony. SST, Inc. is the only company which can aggregate gunfire data from over 80 U.S. cities to develop a national gunfire index to identify national trends of gunfire behavior.

¹ The most current list of patents is available online at: <http://www.shotspotter.com/patents>

Open API for Interfacing with Complementary Systems and Technologies

Only SST, Inc. includes a simple and open data networking API for interfacing with video surveillance systems, Common Operating Picture systems, and Computer Aided Dispatch (CAD).

Unique Level of Experience and Customer Support

The ShotSpotter gunshot location, alert and analysis solution is the only system of its type to be successfully deployed since 1995 to leading law enforcement agencies across the US, as well as by the Federal Bureau of Investigations and other federal entities. ShotSpotter has been reviewed and certified under the US Department of Homeland Security Safety Act and to our knowledge; no other system of this type has been tested and validated by the US Department of Justice. Many of its customers have directly attributed the following results to the use of ShotSpotter:

- Significant reduction of gun related crimes
- Significant reduction of overall and random gunfire
- Increased number of arrests and gun confiscations
- Conviction of criminals with data available from ShotSpotter

Conclusion

No vendor, other than SST, Inc., possesses the comprehensive, field-proven, and patent-protected product offering, as well as the professional services and support, domain knowledge, expertise, longevity, and customer references. Only SST, Inc. can provide a true wide-area gunshot detection, location, alert and analysis solution, as well as future expansions and ongoing maintenance and support. We have achieved sole source status in every state we operate in.

Based on all of the above factors, the overwhelming majority of our customers as well as the Department of Justice and the Department of Defense have been able to proceed with confidence in sole sourcing our wide-area gunshot location solution and support services.

We are honored to support your efforts to combat gun related crimes and appreciate the opportunity to serve you. If we can answer any questions or provide additional support information, please let us know.

Sincerely,

A handwritten signature in black ink, appearing to read "R. Clark", written in a cursive style.

Ralph Clark

ShotSpotter, Inc.
Sole Source Justification

Overview

ShotSpotter's proven track record and extensive offering have been a solid basis for ShotSpotter's prospective customers (including the Federal grant allocation agencies) to justify ShotSpotter as a sole source vendor. By all measures ShotSpotter is the world leading gunshot detection and location vendor to law enforcement, homeland security, and military customers. ShotSpotter's Gunshot Location System (GLS) is the only viable and Commercial-Off-The-Shelf (COTS) solution available to government agencies in their efforts to reduce gunfire and related violent crime. The same core technology is used for urban neighborhoods, critical infrastructure, seaports and distribution gateways, stadiums, airports, campuses, military bases, and military combat zones.

No other technology can meet the ShotSpotter system specifications as all key areas of the ShotSpotter solution are covered by the ShotSpotter patent portfolio.

Unique and Exclusive Features

Enterprise-Class Network-Centric System Architecture

Only ShotSpotter offers a true enterprise-class network-centric approach that has broad applicability to public safety, area protection, homeland security, and military applications. Using standard data networking technologies and protocols, the system is readily extensible to cover expanding geographic areas and provide a combination of alerts and intelligence data to end-users regardless of whether they're located at fixed command and control facilities or in the field.

Visualization of Incident Alerts Conveyed to 9-1-1 Centers and Field-Based Personnel

No other vendor offers the richness of alert information from gunfire and explosions, nor can their offering drive alerts via wireless data communications channels to field-based support personnel. The ShotSpotter GLS includes a rich client application known as the Public Safety Console (PSC) which is available in both a desktop and mobile version. When deployed via the system's network-centric architecture, it can easily be extended to multiple

locations to provide situational awareness. This awareness allows for tactical preparation of an appropriate force response. With the mobile version of the ShotSpotter PSC, responders can receive alerts in the field. If equipped with Global Positioning System (GPS) receivers, responders can optionally see their position relative to the scene, to better estimate egress routes and contain perpetrators. Audio clips are available to dispatchers, field-based commanders as well as responders. The audio provides information while enroute to a scene, stationary in a command van, moving in patrol vehicles or airborne in helicopters. Intelligence inherent in the alerts provides reasonable suspicion allowing agents to make more thorough inquiries and investigations.

Rich Situational Awareness & Forensic Data Provides a Multitude of Benefits

Only the ShotSpotter GLS offers the following forensic and intelligence data that enhance situational awareness, investigations, and prosecutions:

- Actual audio clips of the incident from multiple sources which often includes information and clues to the nature of the disturbance and possibly the type of flight from the incident (e.g., vehicle versus on foot)
- In addition to enhancing situational awareness, exportable audio clips (as standard Waveform Audio Format (WAV) files) provide prosecutors with a way to enable jurors to audibly witness and participate in the events that occurred at a crime scene
- Clear differentiation between single rounds of gunfire and multiple rounds of gunfire
- Ability to determine if the incident involved one or multiple shooters
- Ability to infer type(s) of firearm(s) involved in gunfire incidents
- Details of a shooter's path and rate of movement if multiple rounds are fired on-the-move (e.g., drive-by shooting)
- A continuous spool of up to 72 hours of audio data at each sensor often contains court-admissible probative forensic evidence

Only the ShotSpotter GLS offers persistent storage of incident information plus reports and analytics to support CompStat and violence suppression operations. The GLS logs every detected incident and associated data in a database for secure and persistent storage. This data can be mined and analyzed to reveal patterns and trends to successfully drive tactical and strategic operations. The system's database of secure and persistently stored forensic evidence provides invaluable information to support investigative efforts and fortifying prosecution cases. Standard reports and an industry standard Structured Query Language (SQL) database feed ongoing intelligence with a comprehensive awareness of what is transpiring within specific areas. This data allows agencies to proactively and effectively apply resources when and where they are most needed, as well as justifying specific increases in assets and resources.

Precise Incident Detection Time-Stamping Enables Crime Scene Reconstruction

Only the ShotSpotter GLS captures and stores a precise time-stamp plus GPS coordinate of each detected incident and each round of a multi-round gunfire incident. The GLS records incident details with precise time via Universal Time Coordinate (UTC) within a millisecond resolution derived from the GPS network. Precise information captured and stored, specific to each round of gunfire detected, along with GPS latitude and longitude coordinate (paired with a GPS UTC timestamp), provides investigators and prosecutors with precise information. This level of detail has successfully been used in investigations and courtrooms to exonerate contentious officer-involved shootings, corroborate testimony, refute false testimony, and prove the presence of multiple shooters in the absence of physical evidence and or eyewitnesses.

Alert Status Billboard Provides Immediate Alert Visibility in 9-1-1 Centers

Only the ShotSpotter GLS provides a highly visible status billboard which complements busy 9-1-1 and emergency operations centers. In busy communication centers, an alert status billboard, visible from across the room, provides an immediately recognizable indication that one or more incident alerts are queued for review and possible dispatch.

Open API for Interfacing with Complementary Systems and Technologies

Only the ShotSpotter GLS network-centric architecture seamlessly interoperates with public safety, homeland security, and military systems. ShotSpotter provides its own field-proven Application Programming Interface (API) for public safety deployments that can drive video surveillance systems to capture activity at crime scenes. The same API accommodates interfacing with other systems including Computer Aided Dispatch (CAD), Records Management Systems (RMS), and data fusion engines to contribute to a common operating picture. Military applications can interface with gunshot location alerts using ShotSpotter's own API and or Cursor on Target (CoT) to FalconView, Command and Control Personal Computer (C2PC), Force Battle Command Brigade and Below (FBCB2) to overlay position information on detailed Geographic Information System (GIS) maps. ShotSpotter is also the only vendor to interface gunfire detection information with Unmanned Aerial Vehicles (UAV).

Combination of Telco, Wired and Wireless Sensors

ShotSpotter is the only vendor that can deploy sensors capable of connecting to standard U.S. Plain Old Telephone Service (POTS) phone lines, metropolitan wireless networks, wireless cellular data networks, or any combination thereof to accommodate installation in any environment and any location. Particularly when sensors communicate via wireless cellular networks, optional re-deployment to alternate locations is possible. ShotSpotter also offers wireless mobile sensors for tactical operations and military applications. ShotSpotter mobile sensors and wireless sensors each contain an embedded GPS receiver. Blue Force Tracking

for vehicles equipped with either type of sensor is visible on the system's user interface and exportable via the system's APIs.

On-Site and Hosted System Options

ShotSpotter is the only vendor that, because of its enterprise-class network-centric architecture, offers a system fully deployed at the customer's premise, or hosted and managed by ShotSpotter for the customer at ShotSpotter's national Support Operations Center (SOC).

Scalable Acoustic Surveillance with the Industry's Lowest Sensor Density

Only the ShotSpotter GLS offers the following deployment options that result in the most cost-effective deployments and reduced ongoing maintenance:

- ShotSpotter GLS deployments require an average of 16 to 20 sensors per square mile, far lower than any other vendor in the market. No other vendor can match this low number of sensors, per square mile, which provides the benefit of fast, cost-effective deployments for wide-area coverage. (No vendor can achieve the same low sensor deployment density without violating key ShotSpotter-owned patents.)
- ShotSpotter customers are covering areas exceeding ten square miles with 17 square miles currently being the largest.
- No other vendor has sensor networks spanning a full square mile of coverage, whereas ShotSpotter has single contiguous sensor networks (a.k.a. coverage areas) extending several square miles.
- ShotSpotter is the only vendor to seamlessly enable alerts and monitoring of multiple non-contiguous coverage areas which also includes the ShotSpotter SEVAPS (Special Event, Very Important Person (VIP) and Area Protection System).
- The ShotSpotter system does not require sensors to be in close proximity to the line of fire to detect and locate gunfire. The ShotSpotter GLS regularly detects and locates gunfire when the nearest sensor is hundreds to even thousands of feet from the origin of gunfire.
- The ShotSpotter system geo-locates detectable gunfire anywhere within the defined coverage area and is capable of doing so even if the nearest sensor is offline or blocked by natural obstructions.
- ShotSpotter sensors are deployed on building rooftops using non-penetrating roof mounts in a manner such that they are not visible from the street below.
- Persistent Storage of Incident Data Provides Comprehensive Intelligence. See ShotSpotter GLS and Line-of-Sight (LOS) systems comparison. The system is designed to provide a specific detection and geo-location guarantee of detectable gunfire throughout the entire coverage area (i.e., not simply within a specified range of individual sensors but throughout the entire area.)

Customer Experience Program

ShotSpotter is the only vendor that complements its (hardware and software) product offering with broad inter-departmental training and best practices. Designed and administered by seasoned law enforcement professionals, ShotSpotter's product offering includes end-user training that encompasses all departments within a typical agency. Specifically included training modules, both instructor-led and self-paced, are provided for communications center personnel (i.e., call-takers and dispatchers), patrol officers, investigators, commanders, crime analysts, and members of the DA's staff. Best practices from ShotSpotter's diverse customer base are integral to the training module provided to commanders and other agency leaders.

Support Operations Center

ShotSpotter is the only vendor that, because of its enterprise-class network-centric architecture, can offer ongoing monitoring and proactive maintenance. ShotSpotter's Support Operations

Center (SOC) is staffed by technicians who monitor the health and status of each ShotSpotter system. The SOC staff is also responsible for providing forensic analysis assistance, customer support, troubleshooting, and problem escalation. In addition, members of the SOC and engineering staff are available for expert witness testimony when ShotSpotter GLS data is used in court trials.

Unique Vendor Qualifications

Patent Portfolio/Intellectual Property

ShotSpotter's intellectual property and unique characteristics are protected by a broad patent portfolio which includes U.S. Patent Nos. 5,504,717; 5,703,835; 5,973,998; 6,847,587; 6,965,541; 7,139,222; 7,266,045; 7,411,865; 7,420,878; 7,474,589 and 7,532,542. These patents cover acoustics, gunshot detection and location, mobile sensors, and sensor deployment. Of particular note, among ShotSpotter's patents is spatial filtering technology that allows a minimum number of sensors, as few as 16 per square mile, to detect and correctly classify gunfire. Also unique to ShotSpotter's intellectual patent protected property is the combination of acoustic gunshot detection/location and video cameras. Only users and integrators licensed by ShotSpotter may provide this solution of combined technology. There are multiple patents pending.

Customer-Proven and Time-Tested

Deployments since 1995 - ShotSpotter has been selling, expanding, and servicing systems that remain in operation for over a decade. No other vendor has a single system which has been deployed as long, and no other vendor has the number of successful deployments that ShotSpotter has.

Large-Scale Deployments - ShotSpotter systems currently protect large portions of major metropolitan cities, including several cities where coverage areas range from one to 17 square miles. No major metropolitan area in the United States is currently using any other type of gunfire detection system.

Quantifiable Results - Forensic data from ShotSpotter systems nationwide have resulted in many successful prosecutions, arrests, apprehensions, weapon confiscations, and reductions in gunfire and related violent crime.

Broad Geographic Deployment Diversity - ShotSpotter systems have been deployed and operational for many years in areas as environmentally diverse as Phoenix, Ariz., and Rochester, N.Y., where severe and varied weather conditions are experienced.

Strong References - ShotSpotter customers are strong and vocal references for the system's capabilities.

Department of Justice (DoJ) Approval - ShotSpotter is the only vendor independently tested and approved by the Department of Justice.

Federal Bureau of Investigation (FBI) Approval - ShotSpotter is the only gunshot detection and location system used by the FBI. Approximately 90 miles of Interstate were covered in and around Columbus, Ohio in late 2003, early 2004 to assist with the detection and ultimate capture of a serial shooter. Subsequently, the FBI has cooperatively worked with ShotSpotter and local law enforcement agencies to reduce gunfire and related violent crime. ShotSpotter systems have been successfully deployed using the following wired and wireless communications mechanisms:
900 MHz Industrial, Scientific and Medical (ISM)
4.9 GHz Public Safety Band
5.x GHz ISM
Wireless Cellular (e.g., CDMA-EVDO, GSM-GPRS, or equivalent)*
Ethernet (i.e., fiber optic)
Telephone Line (POTS)

*Code-Division Multiple Access (CDMA), Evolution-Data Optimized (EVDO)
Global System for Mobile Communication (GSM) General Packet Radio Service (GPRS)

System Capabilities	ShotSpotter GLS	Line-of-Sight
True scalable wide-area acoustic surveillance	•	
Extensive support for multiple non-contiguous coverage areas	•	
Small, lightweight, low power consumption sensor nodes	•	
Acoustic sensor placement independent of video cameras for optimal detection	•	
Acoustic sensor placement combined with video cameras	•	
Unobstructed line-of-sight for video cameras to vandalism	•	
Sensor (node) connectivity via any of: wired (POTS), broadband Radio Frequency (RF), cellular	•	
GPS-enabled location of the origin of each incident	•	•
Integration with GIS to geo-reference incidents	•	
Georeferencing integrated with GIS for nearest street address look-up	•	
Single Round Gunshot Detection	•	•
Multiple Round Gunshot Detection with precise UTC timestamp	•	
Precise multi-round timeline for crime scene reconstruction	•	
Visualized alerts integrated with 9-1-1 Communications/Dispatch operations	•	
Alert billboard visible throughout 9-1-1 Communications/Dispatch center	•	
Visualized alerts pushed via wireless networks to MLC/MDT field units	•	
Detection and visualization of out-of-area incidents	•	
Forensic evidence stored with chain-of-custody to support prosecutions	•	
Audio clips for visual and audible review, investigations, and prosecution use	•	
All incident data permanently stored for investigations and crime analysis	•	
Extensible reports and analytics to drive intelligence-led policing	•	
Interface to CAD and RMS systems	•	
Interface to wide-area video surveillance systems	•	
Scalability enhancements to address high capacity during July 4th, New Year's Eve, Cinco De Mayo	•	
24x7x365 system health monitoring coupled with proactive warranty maintenance	•	
Comprehensive system and train practices training for all agency departments and District Attorney offices	•	
Expert witness testimony to support forensic data	•

CITY OF MIAMI, FLORIDA
INTER-OFFICE MEMORANDUM

TO : Pablo R. Velez, Esq., CPPB
Interim Procurement Director

DATE : February 20, 2014

FILE :

SUBJECT : Gunfire Locator System
Sole Source No. 13-14-007

FROM : 
Maritza Suarez, CPPB
Procurement Supervisor

REFERENCES :

ENCLOSURES:

An investigation was conducted to determine whether ShotSpotter, Inc., located at 7979 Gateway Blvd., Suite 210, Newark, CA 94560-1156 is the sole source provider of the ShotSpotter Flex Gunfire Locator System for the Department of Police.

Pursuant to Resolution No. 13-0218, adopted on June 13, 2013, the Miami City Commission directed the City Manager to undertake actions necessary to procure and implement a Gunfire Locator System in the City of Miami, in particular, a four (4) square mile area including, one (1) square mile in Overtown, two (2) square miles in Liberty City and one (1) square mile in Little Haiti.

Acting upon this directive, the Police Department is seeking to purchase the ShotSpotter Flex Gunfire Locator System. This wide-area system uses acoustic sensing technology protected by 27 unique and current patents to identify, discriminate, record and locate gunshots and other explosive events to law enforcement and police departments within seconds of the shots being fired. The sensing is accomplished via multiple networked acoustic sensors deployed over a wide area that communicate registered gunshot and explosion activity back to a central server. Gunshot Location systems is the only viable and commercial-off-the-shelf solution available to government agencies in their efforts to reduce gunfire and related violent crime.

ShotSpotter, Inc. is the exclusive provider of ShotSpotter Flex, the cloud-based, subscription managed service offering which includes warranty, repair, maintenance and support services on all of its systems. No other technology can meet the ShotSpotter system specifications as all key areas of the ShotSpotter solution are covered by the ShotSpotter patent portfolio. A vast number of agencies at all levels of government have purchased this solution through a sole source process, including sole source approvals from the Department of Justice and Department of Homeland Security. In Florida, Miami Gardens, Riviera Beach, and the Palm Beach Sheriff's Office have all requested and received sole source approval to purchase this solution.

Furthermore, the system offers the following unique forensic and intelligence data that enhance situational awareness, investigations, and prosecutions:

- Audio clips of each incident from multiple sources that can be exported as standard WAV files from each participating sensor for sharing with agents, prosecutors, and presentation in court.
- Ability to know if the incident involved a single round or multiple rounds of gunfire.
- Ability to determine if the incident involved one or multiple shooters
- Ability to infer type(s) of firearm(s) involved in gunfire incidents.
- Details of a shooter's path and rate of movement if multiple rounds are fired on-the-move (e.g. drive-by shooting)

Therefore, based on the above, and pursuant to Section 18-92 of the City of Miami Procurement Ordinance, it is recommended that the requirements for competitive bidding be waived and the above findings be approved that ShotSpotter, Inc., located at 7979 Gateway Blvd., Suite 210, Newark, CA 94560-1156, is the sole provider of the ShotSpotter Flex Gunfire Locator System, at a total first year cost of \$275,000. Allocating funds for the first year, in the amount of \$200,000.00 from the Law Enforcement Trust Fund, Award No. 1171, Project No. 19-690003, and Account Code No. 12500.191602.664000.0.0 and \$75,000 from CRA Account No. 10050.920101.883000.0000.00000. Allocating funds for future annual subscription fees in the amount of \$185,000, from the various sources of funds, subject to the availability of funds and budgetary approval at the time of need.

POLICE DEPARTMENT

March 11, 2015

TO: BRUCE RUDD, City Manager
Office of the City Manager

FROM: JERRY P. DYER, Chief of Police
Office of the Chief

SUBJECT: **AWARD A SOLE SOURCE AGREEMENT WITH SHOTSPOTTER TECHNOLOGY, INC., IN THE AMOUNT OF \$450,000 (CALGRIP FUNDS) TO LEASE A GUN SHOT DETECTION SYSTEM SUFFICIENT TO PROVIDE A CONTINUOUS THREE SQUARE MILE AREA OF COVERAGE FOR THREE YEARS; AUTHORIZE THE CHIEF OF POLICE OR HIS DESIGNEE TO EXECUTE THE AGREEMENT**

The Shotspotter Technology (SST) Flex™ Gunshot Location, Alert, and Analysis Service provides a unique gunshot detection and location service. SST's Gunshot Location System (GLS) is the only viable and Commercial-Off-The-Shelf (COTS) solution available. No other technology can meet SST's system specifications.

Other systems such as Safety Dynamics' *Sentri*, Metravib's *Gunshot Detection System*, Microflown Avisa *Acoustic Multi-Mission Sensor*, Raytheon's *Boomerang Gunfire Locator*, and Information System Technologies *Gunshot Localization System* are primarily for military applications against enemy snipers with sensors requiring line of sight incidents.

In public safety, gunshot detection systems are often used in high crime areas for rapid alerts to both the dispatch center and patrol officers. Since the mid-1990s, gunshot location systems have been used by a growing list of cities and municipalities that embrace gunshot location systems as a mission-essential tool in their arsenal for fighting violent crime. SST sends an alert within seconds of the shots being fired, allowing a rapid response to the scene of the gunfire, increasing arrests rates, improving officer safety, securing witnesses and evidence, and enhancing follow-up investigations. The SST system allows officers to pinpoint the location, often within ten feet of the source of gunfire. Based on national trends, only 20% of gunfire is reported to authorities via 911. SST will provide an email notification and web-based incident reporting tool that can be sent to personnel not listening to the radio or driving a patrol vehicle such as staff officers. SST also provides free certified forensic reports signed by an acoustical expert that can be admitted as evidence in court. In the event of a

subpoena, SST only charges travel and per diem expenses when an acoustical expert is needed to testify. The increased reporting will allow analysis of gunshot patterns and trends that will drive directed patrols and intelligence led policing.

Additional benefits include providing investigators with additional forensic evidence to solve crimes and strengthen court cases resulting in higher conviction rates for violent crime.

It is recommended that Council authorize the Chief of Police or designee to specify SHOTSPOTTER, Inc., without substitution, for the lease of gunshot detection devices sufficient to provide three continuous square miles coverage for three years under the sole source competitive bidding exception without an "or equal" provision in the specifications. It is also recommended we award a lease and service contract of \$450,000 to SHOTSPOTTER for the installation and maintenance of the system.

The FY 2015 budget for the Police Department includes sufficient funding for the first year of this system through the CalGRIP grant program. Future payments toward this system will be budgeted in FY 2016 and FY 2017 under the same grant. No general funds will be used.

TO: Sheriff David A. Gee

FROM: Captain David Fleet *J-118M*
District I

RE: ShotSpotter Contract

MESSAGE:

Attached please find the ShotSpotter Gunfire Location proposal and three year contract from SST. This ShotSpotter Flex program would cover approximately a three square mile area within the University Community and a mile and half square mile area within the Nuccio Community for a three year period. The contract has been reviewed and edited by the HCSO Legal Section and the Legal Staff at SST and is therefore ready for your final approval.

The funds for this project have been approved by the Hillsborough Board of County Commissioners through the Crime Prevention and Safe Neighborhoods Trust Fund and have been made a line item along with monies for the Eye on Crime System and Boys and Girls Club. Mr. Robert Parkinson, the Criminal Justice Liaison for the county, will coordinate the transfer of funds to the Sheriff's Office after the new fiscal year begins on October 1, 2015.

Chief Deputy Joe Docobo
Hillsborough County Sheriff's Office
P.O. Box 3371
Tampa, FL 33601-3371

Chief Deputy Docobo:

On September 17, 2015, The Hillsborough County Board of County Commissioners adopted the County Budget for Fiscal Year 2016. The adopted budget contained additional *Crime Prevention and Safe Neighborhoods Trust Funds* which are intended to support the Hillsborough County Sheriff's Office implementation of the *ShotSpotter Gun Violence Investigative Technology* project. In accordance with Chapter 775.083(2) Florida Statutes, *The Crime Prevention and Safe Neighborhoods Trust Fund Spending Plan* has been amended to reflect the incorporation of the ShotSpotter project. We look forward to continued community problem solving and collaboration with you and your staff.

If I can be of further assistance please do not hesitate to contact me at (813) 276-2888.

Sincerely,

Bob Parkinson
Criminal Justice Liaison

**Crime Prevention and Safe Neighborhoods Trust Fund: Amended Spending Plan
