Core System Functionality

At the core of Spillman's system is our Integrated Hub, a single-source database where information is referenced by all modules. Using a centralized database, all information is entered, stored, and then extracted in real time from one location. Spillman's Integrated Hub allows all applications in the system to reference the same repository of information. This modular design eliminates complicated "internal" interfaces and prevents users from duplicating data entry, which saves time and ensures data accuracy.

Core System	Licensing	Price
